EXAMINER

SMITH, PETER J

ART UNIT PAPER NUMBER

2176

DATE MAILED: 10/21/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/883,805

Applicant(s)

BROWNE ET AL.

Examiner

Peter J Smith

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 18 June 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☒ Claim(s) 9 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This action is responsive to communications: application filed 6/18/2001.
2. Claims 1-17 are pending in the case. Claims 1, 8, and 10 are independent claims.

### ***Priority***

3. Applicant claims priority to provisional application 60/219,277 filed 7/19/2000. The Examiner notes that this provisional application appears to be directed towards different subject matter compared to the present application. Furthermore, the Assignee and all Inventors of provisional application 60/219,277 are different from the Assignee and Inventors of the present application. As a result the Examiner will use an effective filing date of 6/18/2001 for the present application until a satisfactory explanation of the validity of the provisional priority claim is presented in a response from Applicant.

### ***Claim Objections***

4. Claim 9 is objected to because of the following informalities: The claim depends on itself. The Examiner assumes claim 9 was meant to depend on claim 8 and Examined as such. Claim 9 is also objected to because it has no limitations. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**6. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Excel 2000 (hereinafter “Excel”), Microsoft, released 1999, screenshots pages 1-16.**

**Regarding independent claim 1**, Excel teaches receiving a user command to generate in pages 2-9. The user can import the data externally as shown in the screenshots, or the user can manually input the data. Excel teaches determining whether pre-existing data is to be imported and determining where the pre-existing data is located into the list in pages 2-9. If the user selects “Get External Data” from the Data menu, then the user is selecting obtain pre-existing data. The user selects then selects the location of the pre-existing data. Excel teaches creating a list in a worksheet in the spreadsheet program in pages 7 and 8. The data can be inputted manually and then selected by the user to indicate the list. Excel teaches performing a second sequence, comprising the step of defining a plurality of fields in the list, each field comprising a plurality of characteristics in pages 3-8. Excel teaches performing a third sequence comprising the step of creating the list in the spreadsheet program, such that each field in each record is logically associated to every other field in the record in pages 7-15. The example sorting demonstrates that the cells in the list are linked horizontally and maintain row integrity throughout the sorts performed on the various columns. Thus, the cells are logically associated with the members cells in the other fields.

What Excel does not teach is making the list a List Object. Excel does teach the creation and embedding of objects into a spreadsheet in page 16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created

Art Unit: 2176

the claimed invention. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding dependent claim 2**, Excel teaches determining whether the pre-existing data is located in a spreadsheet program worksheet, and using a user input range within the worksheet to identify the pre-existing data in page 8. Excel teaches opening a Query dialog box operable for receiving user commands to navigate to a location that contains the pre-existing data in page 2.

**Regarding dependent claim 3**, Excel teaches determining the location where to place the list in page 6.

**Regarding dependent claim 4**, Excel teaches wherein the location to place the list is selected from the list consisting essentially of a new worksheet, or an existing worksheet in page 6.

**Regarding dependent claim 5**, Excel teaches wherein the step of defining the fields in the list comprises, adding a new field, modifying a field, deleting a field, or altering at least one of the characteristics of a field in pages 3-5.

**Regarding dependent claim 6**, Excel does not teach making the list a List Object. Excel does teach the creation and embedding of objects into a spreadsheet in page 16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious to have created the

Art Unit: 2176

list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding dependent claim 7,** What Excel does not teach making the list a List Sheet.

Excel does teach the creation and embedding of objects into a spreadsheet or into a separate page sheet in page 16. The object can be moved anywhere within the sheet to which it is embedded.

An object forming a separate sheet is beneficial so that it does not cover any cells of a spreadsheet page. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious to have created the list in the form of an object List Sheet so that the list would have been easier to manipulate and not have covered any cells of the data sheet.

**Regarding independent claim 8 and dependent claim 9,** Excel teaches displaying a dialog box operable for receiving user commands in pages 3-5. Excel teaches specifying the location within the spreadsheet wherein the list will be positioned in page 6. Excel teaches specifying the location of any pre-existing data that will populate the database in page 6. Excel teaches displaying a dialog box operable for receiving user commands to define a plurality of options associated with each of the fields in the list in pages 3-5. Excel teaches displaying a dialog box operable for receiving user commands to save the plurality of options associated with each field in page 5. Excel teaches creating the list in a worksheet within the spreadsheet program, such that each field in each record is logically associated to every other field in the record in pages 7-15. The example sorting demonstrates that the cells in the list are linked

Art Unit: 2176

horizontally and maintain row integrity throughout the sorts performed on the various columns.

Thus, the cells are logically associated with the members cells in the other fields.

What Excel does not teach is making the list a List Object. Excel does teach the creation and embedding of objects into a spreadsheet in page 16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding independent claim 10**, Excel teaches a first plurality of input elements operable for receiving user commands to determine the location of data to input into the list in page 2. Excel teaches a second plurality of input elements operable for receiving user command to determine the location where the list will be placed in the spreadsheet in page 6. Excel teaches a window for defining the fields in the list and a drop down menu operable for selecting a data type associated with each field defined in the window in pages 3-5. Excel teaches an “OK” button which is equivalent to a “FINISH” button for creating the list, such that each field in each record is logically associated to every other field in the record in pages 6-15. The example sorting demonstrates that the cells in the list are linked horizontally and maintain row integrity throughout the sorts performed on the various columns. Thus, the cells are logically associated with the members cells in the other fields.

What Excel does not teach is making the list a List Object or a field form box for receiving a field name for each field defined in the window. Excel does teach the creation and

Art Unit: 2176

embedding of objects into a spreadsheet in page 16. A user label the different fields in Excel by populating a header cell at the top of each field with a name for the field. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel and the field naming ability of Excel to have created the claimed invention. It would have been obvious and desirable to have named the fields so that the user would have known what the cell would have represented in each field. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding dependent claim 11**, Excel teaches a first reference window for receiving user input to identify the location of data to import into the list external to the spreadsheet in pages 2-5. Excel teaches a second reference window for receiving user input to identify the location in the spreadsheet of the list in page 6.

What Excel does not teach is making the list a List Object. Excel does teach the creation and embedding of objects into a spreadsheet in page 16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding dependent claim 12**, Excel teaches a plurality of buttons operable for defining the fields in the list in pages 4-5. What Excel does not teach is making the list a List

Object. Excel does teach the creation and embedding of objects into a spreadsheet in page 16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet.

**Regarding dependent claim 13**, Excel does not specifically teach a plurality of buttons comprised from the group consisting essentially of an “Add” button, a “Modify” button, a “Delete” button, and a “Setting” button. The plurality of buttons consisting essentially of an “Add” button, a “Modify” button, a “Delete” button, and a “Setting” button are needed to generate and maintain the fields of a list. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified Excel to have used a plurality of buttons comprised from the group consisting essentially of an “Add” button, a “Modify” button, a “Delete” button, and a “Setting” button to have assisted the user in creating the list in the spreadsheet.

**Regarding dependent claim 14**, Excel teaches a frame operable for defining the border of the list in page 8. Excel teaches in page 7-8 that a row selector may indicate a particular row of the list. Excel teaches in pages 7-8 a set of blank cells which may be used as a plurality of field headers operable for identifying the data fields in the plurality of records. Excel teaches a cell table operable for storing individual data fields in pages 7-8.

**Regarding dependent claim 15**, Excel teaches embedding an object into a spreadsheet in page 16. Objects in Excel become active when a constituent part of the object is active. Since

Art Unit: 2176

Excel does not specifically teach the list object, Excel does not teach wherein the frame is active when an active cell is within the List Object. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the list creation properties of Excel with the object creation and embedding properties of Excel to have created the claimed invention. It would have been obvious and desirable to have created the list in the form of an object so that the list would have been easier to manipulate and move about the spreadsheet. The List Object would be active when a cell within the object is activated by the user.

**Regarding dependent claim 16**, Excel does not specifically teach wherein the field headers are ghosted out over the top of a spreadsheet column header when the field headers are scrolled off the spreadsheet. Excel does teach split panes so that field headers may be viewed even when scrolled off the spreadsheet. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the list of Excel to have ghosted out the field headers over the top of a spreadsheet when the field headers are scrolled off the spreadsheet so that the user could maintain an identification of the data type in each column.

**Regarding dependent claim 17**, Excel teaches wherein the embedded database further comprises an unused space around the cell table, expands as new records are inserted into the cell table, the unused space being operable for facilitating the insertion of new records and fields by maintaining a region between the frame and the cell table in pages 7-8.

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jamshidi et al., US 6,631,497 B1 filed 7/19/1999 discloses binding data to cells in a spreadsheet. Shah, US 6,154,740 filed 5/20/1998 discloses displaying a sorted list on a display device. MacGregor et al., US 5,396,621 patented 3/7/1995 discloses sorting a table by rows or columns in response to interactive prompting with a dialog box graphical icon. Tucker et al., US 6,205,453 B1 filed 3/13/1998 discloses implementing selectively index enabled multi-column lists. Listou, US 6,216,139 B1 filed 11/20/1995 discloses an integrated dialog box for rapidly altering presentation of data objects. Nielsen, US 6,373,504 B1 filed 9/30/1997 discloses enhanced sorting of table data. Glassey, US 5,604,854 patented 2/18/1997 discloses reformatting multi-dimensional spreadsheet information. Liu et al., US 5,706,449 patented 1/6/1998 discloses providing improved specification of multiple sort criteria in a graphical user interface.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter J Smith whose telephone number is 703-305-5931 (571-272-4101 after 10/20/2004). The examiner can normally be reached on Mondays-Fridays 7:00am-3:30pm.

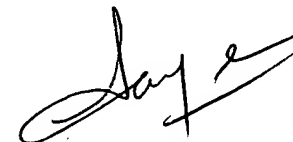

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H Feild can be reached on 703-305-9792 (571-272-4090 after 10/20/2004). The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
